

Environmental

SERVICES FOR LAND

Overview

There are many benefits to working with a full-service firm on commercial and residential projects. Not only does our environmental team bring expertise in a variety of issues, they have decades of experience with due diligence and gaining project approvals. Our skills are applied nationally with an appreciation of practical planning, engineering, construction and community development standards.

Winning Approval Strategies

We strategize with clients to balance regulatory requirements with the desired project outcome. Integration of technical, regulatory, and political issues is a critical step we take to arrive at recommendations that enable informed agency decisions. This effort requires insight into regional regulatory processes and the use of iterative design to justify a final design and drive a smooth review process.

Team Integration

Westwood's environmental team supports all phases of projects with wetland, wildlife, cultural resources, and soils information utilizing GIS and GPS field data management tools. We collaborate with in-house engineers and surveyors to facilitate efficient design efforts. Our broad understanding of design and construction has given us a track record for delivering rapid permitting and practical permit conditions for our clients.

Environmental Services

- Wetland Delineation and Permitting
- Wetland Mitigation Banking and Monitoring
- Biological Surveys
- Invasive Species Surveys
